

Notice for Hardware / Software / Accessory Vendors

DonorTec is inviting expressions of interest from vendors for a new distribution opportunity for the Australian market, and if appropriate a global roll out via TechSoup Global Network.

The target market is the nonprofit sector via a unique distribution channel; DonorTec – exclusively distributing donations of the latest software and hardware products from Microsoft and Cisco. Launched this year with huge success we seek to expand vendors due to demand for a broad range of products.

Many people don't realise the breadth of the nonprofit sector market - larger than the IT sector. It represents at least 3% of Australia's GDP and includes: charity, health, disability, community, arts & cultural, training, youth, elderly, environment and more.

Nonprofits strive to be efficient and effective. Access to current technology is critical to this which DonorTec makes possible. Vendor partners will benefit from an extensive source of stories on how you support community.

DonorTec provides qualification to ensure only eligible nonprofits access the program. We work with vendors on their preferred eligible target markets and budget.

The partnership could range from a full donation budget for the sector to a part donation or discount or combination.
